BY GUSTAFS - DESIGNED FOR EYES AND EARS

**GUSTAFS**   
DESIGNED FOR EYES AND EARS

# Beautifully crafted in Sweden from the finest natural materials

Our sense of wood and creative solutions has been integral to our products since Gustafs was founded in 1913. Our dedication to creating beautiful, nature inspired environments, where people experience harmony, has taken us to where we are today.

Our veneer masters select the finest veneer sheets for our products.

GUSTAFS ACOUSTIC

# Lamellow

## FRAMING PROFILES

By using Lamellow framing profiles and additional felt strips you will always have perfect framing on your panels.

The framing profile can be used on all sides of the panel's edges, and gives the wall a solid wood feeling.

- 1) Felt strip Wool Grey. 2) Framing profile American Oak light core.
- 3) Framing profile American Oak, dark core.
- 4) Felt strip Anthracite.

## PANEL CONSTRUCTION:

Lamellow+ is our Architectural version with fire class B-s1,d0.

Visit [Gustafs.com](https://Gustafs.com) for more information.

Lamellow Linear Ash on Wool Grey acoustic felt.

Lamellow Linear Knotty Oak light core and Wool Grey felt.

Lamellow Linear American Oak on Anthracite felt.

## Sounds beautiful

Gustafs' products have been optimizing room sound quality for decades, from smaller offices to world-famous concert halls.

Take in the forest atmosphere with wooden interiors. Studies show that staying close to nature by spending time in buildings with wood interiors, can calm us down and help us to regulate our emotions.

# Installation

Our acoustic panels are easily installed directly on an existing wall or ceiling.

## EQUIPMENT NEEDED FOR ASSEMBLY:

Materials needed for installation, saw, circular saw or foxtail, screwdriver, spirit level, scale, carpet knife.

## ACOUSTIC CLASSIFICATION D

To achieve acoustic classification D, install directly on the wall using mounting screws (15 pcs per acoustic panel with dimensions 3.5x35mm) and screw in the felt between the ribs.

Black screws are used for anthracite felt and silver colored screws for Wool Grey felt.

It is also possible to glue the acoustic panels on the wall, for example with a MS-polymer. Fix the panel during the curing.

## ACOUSTIC CLASSIFICATION A

Materials needed: Battens 45mm, screws for the underlying battens, mineral Wool (45 mm).

To reach soundclass A, you place 45 mm mineral wood behind the panels. We recommend that you first install 45 mm battens on the wall with a distance of cc 600 mm.

Install the panels using 15 screws per panel.

## FRAMING PROFILE & FELT STRIP

Get perfect endings with Lamellow framing profile and felt strip.
